Own-feed demonstration: detected vehicles and number plates

Sentinel · window 24 Sep 2026 01:30:10 – 01:39:17 IST · generated 24 Sep 2026 16:57:07 IST · times are frame timestamps from the stream

Feeds of our choice, no government feed: two Pexels stock traffic clips (filmed on a Mumbai road) with every plate replaced by a synthetic Gujarat registration (AMD-TRAF-001, AMD-TRAF-002), and two simulator clips with drawn vehicles and synthetic plates (AMD-AMC-001, AMD-POL-001), replayed as RTSP cameras.

One analytics worker on these four cameras on a GTX 1650 Ti laptop, 24 Sep 2026; the stored plate is the per-character vote across a vehicle's reads. The same run as the accuracy figures in bench/results/anpr_eval_current.md.

Watchlist: mock VAHAN and eGujCop records (local sample data, not the live systems) and one manual entry, GJ13LU9863, a synthetic plate in the AMD-TRAF-002 clip. Intrusion: a demo zone on a kerb strip of AMD-TRAF-001 standing in for a restricted area; the clip loops every 60 s, so the same people re-enter the zone each loop, and the 120 s repeat window lets an alert through every second or third loop.

862 plate reads	**141** distinct plates	**10** possible-same-vehicle groups (24 plates)	**4** cameras with reads	**10** watchlist alerts raised

54 reads of watchlisted plates	**655** reads with vehicle type	**8,919** frames analysed for objects	**4** intrusion alerts

An alert is raised once per watchlist entry per camera per 120 s; further reads of the same plate are marked "watchlisted".

Vehicles one row per distinct plate, in order of first read

A row is a plate as stored (normalised), not a verified vehicle: a misread can produce a plate no vehicle carries. A read is one stored sighting, one pass of the plate through one camera's view, however many frames read it. Plates one character apart (one character different, missing or extra, or linked through a chain of such plates) are grouped as *possible same vehicle*: each keeps its own row and reads, nothing is merged or corrected; within a group the most-read plate comes first. Cameras are listed in order of the plate's first read at each. Vehicle type and colour are shown where attributed, most frequent first. Best read is the crop with the highest OCR confidence. OCR confidence is the stored value: the best frame's score, raised to at least 0.90 when three or more frames agree on every character, so it ranks reads and is not a measured accuracy. A *near match* alert matched a watchlist plate that differs from the read by a character (the fuzzy match that allows for OCR slips).

Cameras same window

Frames analysed comes from the per-minute vehicle and person count rows (— where the camera wrote none, e.g. plate-only analytics). Median OCR confidence is over the stored values described under Vehicles. *Wide view*: vehicles were detected but no plate was read, which usually means plates are too small or too oblique in that view to read.

CAMERA	NAME	PLATE READS	DISTINCT PLATES	READS WITH VEHICLE TYPE	MEDIAN OCR CONF	FRAMES ANALYSED	NOTE
AMD-AMC-001	Income Tax Circle, Ashram Road	43	6	0%	0.90	2,221	
AMD-POL-001	Sarkhej-Gandhinagar Highway Toll Approach	5	1	0%	0.99	2,233	
AMD-TRAF-001	Ashram Road Junction, Ahmedabad (stock traffic footage)	183	41	80%	0.90	2,226	
AMD-TRAF-002	Paldi Char Rasta, Ahmedabad (stock traffic footage)	631	94	81%	0.97	2,239	

Vehicle and person detection per camera, same window

Average number in view per analysed frame / most seen in any single frame. A detection is a box in one frame, not a unique vehicle or person: nothing is tracked or identified, and people are counted only. Vehicle type is the COCO class of the box the plate sits in; colour is a heuristic over its body panels and is left blank when unsure, on IR frames and on two-wheelers.

CAMERA	NAME	FRAMES ANALYSED	VEHICLES AVG / PEAK	PEOPLE AVG / PEAK	CAR AVG	MOTORCYCLE AVG	BUS AVG	TRUCK AVG	BICYCLE AVG	LAST WINDOW

Intrusion alerts zones drawn on the camera's picture, same window

An intrusion alert is raised when people or vehicles of a zone's watched classes stay inside the zone, while it is armed, for its minimum dwell time. It records the zone, which classes and how many were inside, when the first was seen inside and the dwell that triggered it: no image, box or

track of anyone. At most one alert per zone per camera per 120 s, as for watchlist alerts. Times are frame times from the stream.

FRAME TIME	CAMERA	ZONE	IN THE ZONE (PEAK)	FIRST INSIDE	DWELL	SEVERITY	STATUS
01:30:27	**AMD-TRAF-001**	Demo: kerb strip (simulated restricted area) kerb-demo	person ×2	01:30:24	3.0 s	high	new

01:35:30	**AMD-TRAF-001**	Demo: kerb strip (simulated restricted area) kerb-demo	person ×1	01:35:27	3.2 s	high	new
01:38:27	**AMD-TRAF-001**	Demo: kerb strip (simulated restricted area) kerb-demo	person ×2	01:38:24	3.0 s	high	new

Appendix A · Every plate read by camera, in time order

The reads behind the Vehicles table: one row per stored plate read, with the frame time from the stream, the plate after normalisation, the text the analytics worker sent before it, and the evidence crop.
